THE J2 WAY

ENSURE YOU GET THE JOB DONE RIGHT

1

1. Gather Supplies

Your first step is to gather all necessary cleaning products and tools. For routine cleaning, these items include protective eye wear, gloves, clean cloths, vacuum, and products such as Contempo H2O2 Spotting Solution, and the Contempo Deluxe Spotting Kit. Anytime you clean with chemicals, you must use personal protective equipment, as directed on the Safety Data Sheets, or SDS, for the cleaning products being used.

2

2. Vacuum Edges

Use your vacuum and attachments to vacuum along baseboards. Pick up any large debris by hand.

3

3. Vacuum Carpet

When vacuuming, start at the section that is the farthest into the area from the doorway or entry, then work your way back out of the area. Vacuum in a consistent, linear pattern. Make sure to cover the entire area. You will need to spend more time on high traffic or heavily soiled areas, including picking up any remaining visible debris by hand.

4

4. Clean & Return Equipment to Storage Area

Finally, if no spot/gum removal needs to take place, clean your equipment and return it to its proper storage place.

DELUXE CVD 30 – CVD 38

Upright Vacuums

- CRI Gold Certification
- True HEPA Certified Vacuums
- Upgraded handle with fingertip on/off switch
- Available in 12" and 15" models
- Pigtail design for easy cord replacement
- Remove brush plate without tools

WHAT IS THE J2 WAY?

- Reduce customer costs with better solutions
- Improve customers' productivity
- Make acquiring products easier for our customers
- Protect our customers' brand

"We promise to do our best each and every time to meet our customers' needs with exceptional service and solutions."

SPOT TREATING YOUR CARPET

1. Select Spotter

It is important to remove carpet spots as soon as possible. First, identify the substance then select the most appropriate spotter for the job. Follow directions on the product's label.

2. Blot

Blot up the spot with a white absorbent cloth.

3. Apply Spotter

Apply appropriate product to the spot, but do not over wet the carpet.

4. Blot & Rub

To keep the spot from spreading, blot and rub the spot from the outside edge toward the center.

5. Spray and Blot

Spray again, let set. Blot again with absorbent cloth.

6. Flush Away

Flush away the remaining spray with water, using a trigger sprayer. Blot dry.

CARPET EXTRACTION

1. Perform Complete Vacuum & Spot/Gum Procedures

Before beginning carpet extraction, you should perform vacuuming and spot treatment as seen in the previous pages of this section.

2. Gather Supplies & Apply Personal Protective Equipment

For extraction cleaning, gather any necessary products and tools. These items include protective eye wear, gloves, foot wear, clean cloths, carpet extractor, pump-up sprayers, vacuum, "Wet Floor" signs, and all required carpet cleaning products. Any time you clean with chemicals, be sure that you use personal protective equipment, as directed on the Safety Data Sheets, or SDS, for the cleaning products being used.

3. Prepare Sprayers & Fill Extractor

Fill your sprayers with the properly diluted Spartan pre-treatment and extraction products of your choice. Fill extractor with warm water only. Then you are ready to move to the space that needs cleaning.

4. Add Defoamer

Next, add Spartan Defoamer to the vacuum hose or recovery tank as directed on the product label and attach hoses.

5. Remove Furniture & Place Signs

Remove any portable furniture that may be in the way. Be sure to use safe lifting procedures. Place "Wet Floor" signs at entrances and where carpet and hard floor meet.

6. Pre-treat Heavy Traffic Areas

Pre-treat traffic lanes and soiled areas using a pump-u sprayer and Spartan pretreatment.

7. Spray Area

Lightly spray entire area to be treated with the extraction product solution.

8. Extraction

Start the extraction and rinsing process in the corner farthest from the door and work backward toward the door. Feed the solution as you move backward. Release the lever before you reach the end of the pass and pull the wand or unit through. This will avoid over-wetting the carpet. Make four or five passes on the carpet in a 3 foot by 5 foot area. To extract excess moisture, go back over the area with the extractor wand or unit and the solution valve closed. Continue extracting the rest of the carpet. Rinse carpet again as directed and if necessary.

9. Clean & Return Equipment to Storage Area

Clean and return your equipment, making sure to thoroughly rinse and clean the extractor recovery tank.

10. Replace Furniture & Remove Signs

Remove and store "Wet Floor" signs when the carpet is dry. Replace any furniture that you moved.

CARPET CARE PRODUCTS

NAME	ITEM NO.	UNIT	DESCRIPTION	PRICE
CVD30/38	TND91430/38	Each	These vacuums have always been the choice of commercial cleaners due to their quality, dependability and features. The new CVD upright vacuums have an improved design.
